#### Commentary

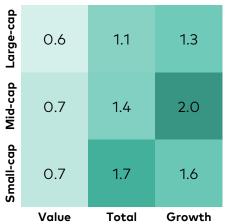

**US equities advanced this week**, showing resilience despite the government shutdown that began Thursday after lawmakers failed to reach a funding deal. Investors focused on weaker labor data, which strengthened expectations for a Federal Reserve rate cut in October. The ADP report showed a loss of 32,000 jobs versus forecasts for a 51,000 gain, fueling optimism for policy easing. The Nasdaq and Russell 2000 outperformed as growth and small-cap stocks benefited from lower-rate expectations. Roughly 750,000 federal employees were furloughed, halting key data releases, including the September nonfarm payrolls and possibly the CPI report due October 15. Treasury yields declined across maturities as weaker labor and consumer confidence data lifted bond prices. Municipal and investment-grade corporate bonds performed strongly, supported by solid demand.

European equities surged to record highs, with the STOXX Europe 600 up 2.9%, driven by strong tech gains and optimism over potential US rate cuts. Germany's DAX and France's CAC 40 each rose about 2.7%, while the UK's FTSE 100 gained 2.2%. Eurozone inflation ticked up to 2.2% in September on higher services costs, though ECB President Christine Lagarde described inflation risks as "quite contained" and affirmed policy readiness. The jobless rate edged up to 6.3%, while consumer confidence improved slightly. In the UK, mortgage approvals slipped to 64,700 in August, but house prices rebounded 0.6% in September after a small decline the previous month.

### Alternative assets

Oil prices plunged roughly 8%, marking one of the steepest weekly declines in several months. The rout was driven primarily by mounting supply concerns: markets began pricing in a likely OPEC+ production increase (possibly up to 500,000 barrels per day) for November, which would further weigh on an already soft demand backdrop. However, OPEC+ surprised markets with a smaller-than-expected output increase. The group agreed to raise production by just 137,000 barrels per day starting in November, which was viewed as cautious given worries about oversupply. That restraint helped boost crude prices around ~1.5% on Monday.

On the precious metals side, gold has been on a tear, driven by safe-haven flows amid global uncertainty. Gold hit new record highs – almost touching \$4,000 per ounce - as investors sought refuge from macro and political risks, including the US government shutdown and instability of key currencies.

**Bitcoin too had a spectacular week.** It surged to a new all-time high, touching around \$125,000+, before some retracement. The rally was fueled by strong inflows into spot Bitcoin ETFs (with one estimate of ~\$3.25 billion in net inflows over the week) and growing institutional adoption, as investors increasingly viewed BTC as a hedge against potential dollar weakness and macro uncertainty.

<sup>1.</sup> Central bank interest rates have significant impact on equity valuations. Higher rates result in lower discounted values of future earnings, which naturally bring down the stock prices.

<sup>2.</sup> Inflation is currently a very closely watched macroeconomic statistic, as central banks respond to high inflation by raising interest rates. Generally, developed economies target a 2% annual inflation rate, which is less than current inflation levels in both the US and Eurozone.
